

THE MIXER

The smart center is designed to be a mixer for various users mixing different flows of programs allowing interdisciplinary interactions. The scheme created a sustainable and innovative place for local community. The building started from two efficient massing responding to the site, connected by middle mixer space which is multifunctional space where inspiring and interdisciplinary conversations usually happen. The mixer will play a vital role in future education process. The modular furniture in the mixer space will be able to be rearranged according to people's needs, which will serve learning purpose in a better way comparing to traditional setting. Children's hands sensibility will be improved in the organizing process. A unique shading system is also design along with the building façade to achieve better sustainable performance also creating iconic and intimate spaces in the building. An iconic observatory tower is also designed for children have different perspective to understand local nature world. The smart center is also functioning as a mixer at the masterplan scale, bringing people together from different programs. Agro lands are designed to be regular units distributing on the site in a harmonious way regarding new programs and existing site conditions.
