

## **BRIEF DESCRIPTION OF THE ARCHITECTURAL CONCEPT**

### **Given that**

- **The successful architectural image of COAF SMART in Lori region has been very positively appreciated by both professional and public circles in Armenia.**
- **The strategic goal of COAF is to build SMART centers in all regions of Armenia.**
- **According to the terms of the tender, it is suggested to consider the architectural design of the COAF SMART Center (2018) in the Lori region, RA as a prototype, as all COAF SMART centers must have a common sign of belonging to the same initiative.**
- **At the same time, each center should be unique, in harmony with the specific features of the region.**
- **As a concept, we propose to preserve the conceptual solutions of the three-sided one-storey COAF SMART center of the first settlement, Lori region, to use it as a corporate style, both for the second and for the remaining COAF SMART settlements to be built in Armenia in the future.**

- **Preserving the stylistic generality, we also propose to introduce an element of local landscape feature typical of the Armavir region, with a panorama of mountain ranges on the horizon, repeating the silhouette on the fronts**
